

Study 'rat.plasma' -- Mean diagnostics

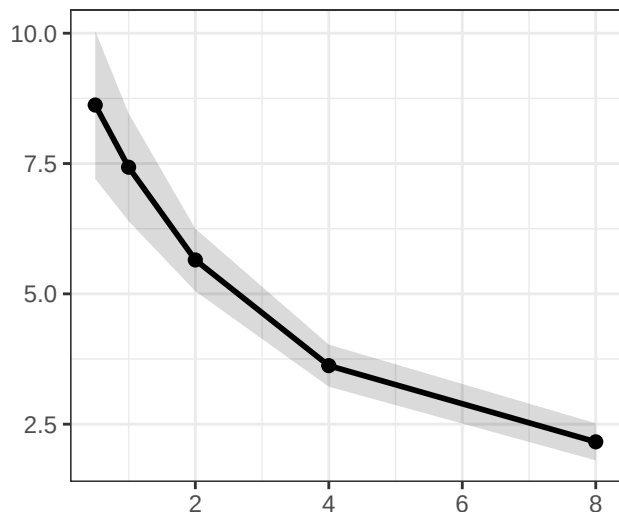

Observed

ribbon ± 1 SD [sqrtdiag(V_obs)] | shared y scale

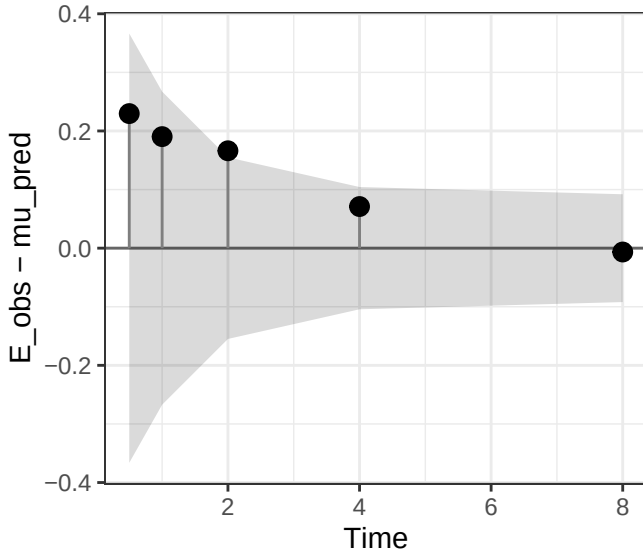

Predicted

ribbon ± 1 SD [sqrtdiag(V_pred); BSV + sigma] | shared y scale

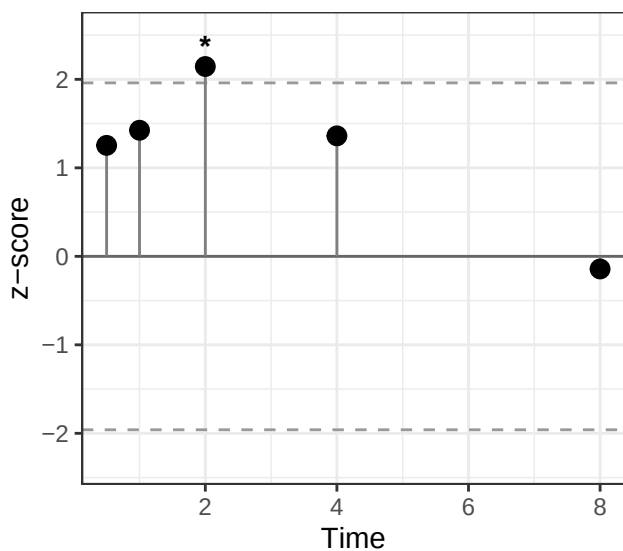

Residual

band ± 2 SE(mean) [SE = sqrt(V_pred[t,t]/n)]

Standardised residual

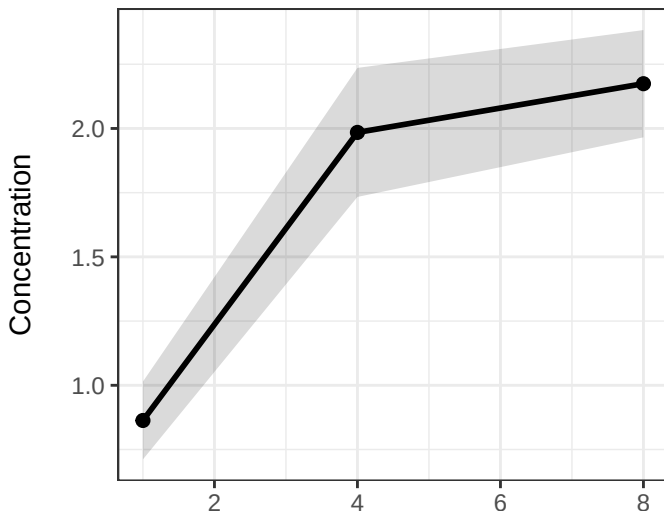

dashed ± 1.96 | $z = \text{resid}/\text{SE}$ | * $p < .05$ ** $p < .01$ *** $p < .001$

Study 'rat.tissue' -- Mean diagnostics

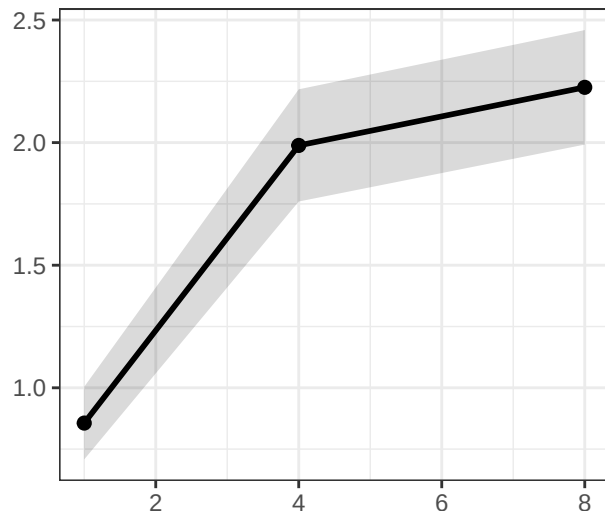

Observed

ribbon ± 1 SD [sqrt(diag(V_obs))] | shared y scale

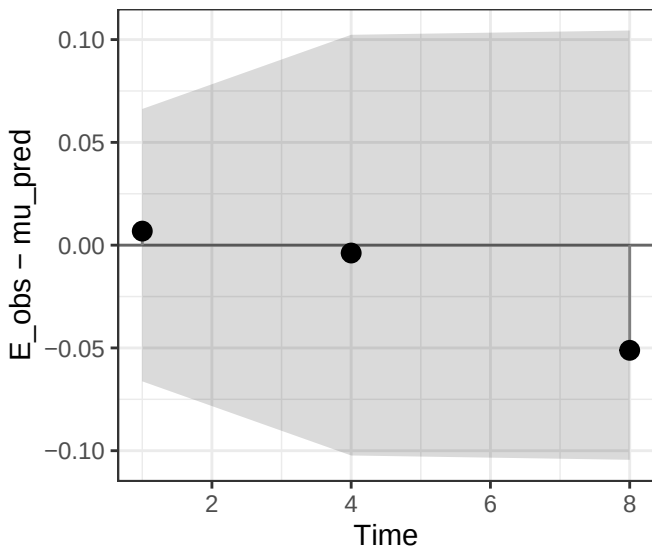

Predicted

ribbon ± 1 SD [sqrt(diag(V_pred)); BSV + sigma] | shared y scale

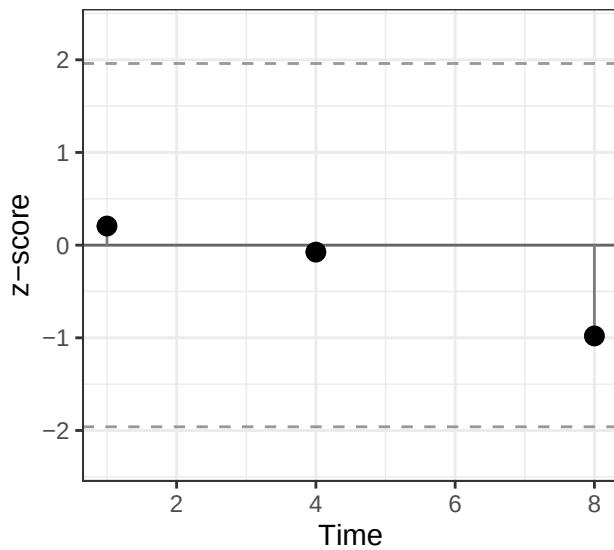

Residual

band ± 2 SE(mean) [SE = sqrt(V_pred[t,t]/n)]

Standardised residual

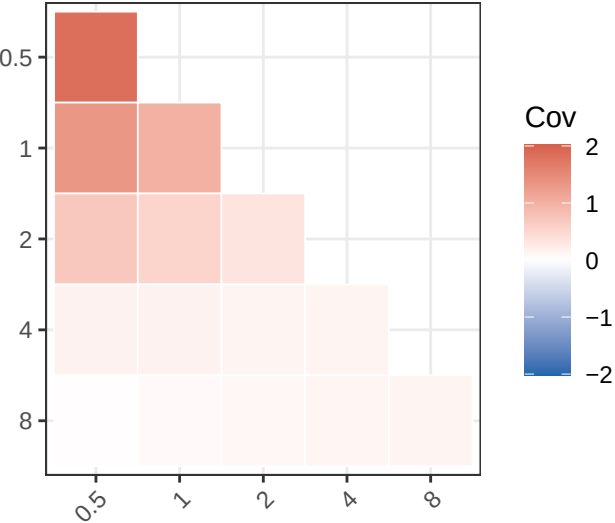

dashed ± 1.96 | z = resid/SE | *p<.05 **p<.01 ***p<.001

Study 'rat.plasma' -- Covariance diagnostics

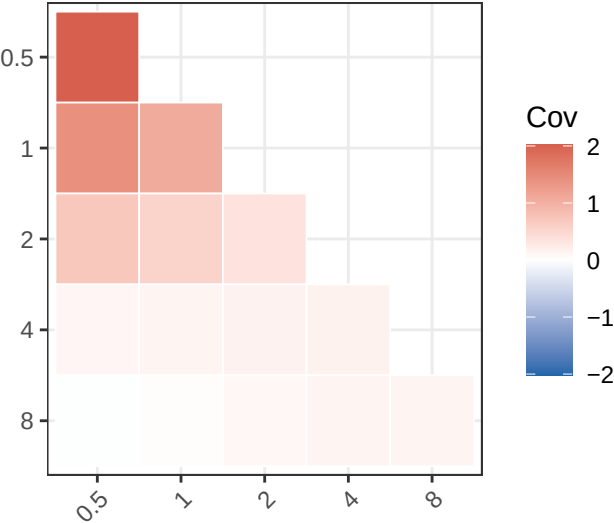

Observed

sample (co)variance from data [shared scale]

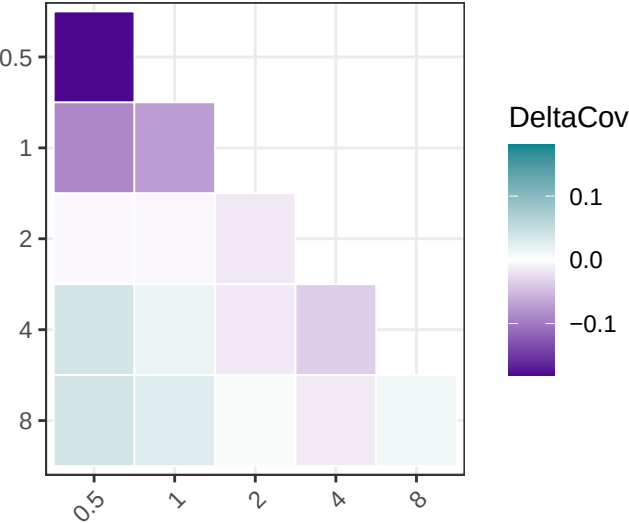

Predicted

MC cov + sigma [shared scale]

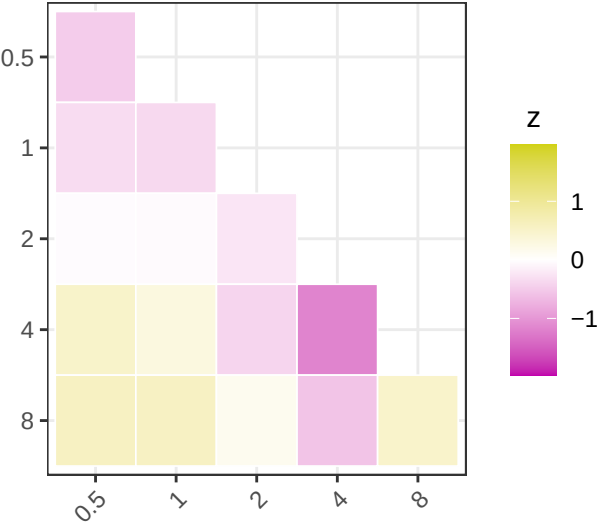

Residual

$V_{obs} - V_{pred}$

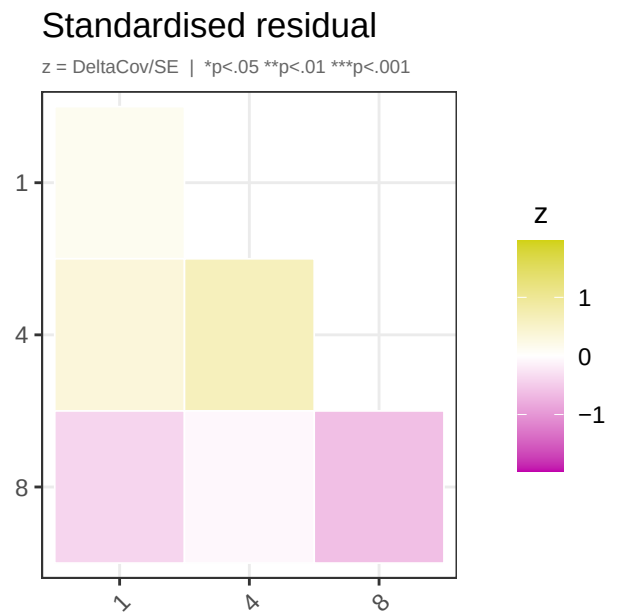

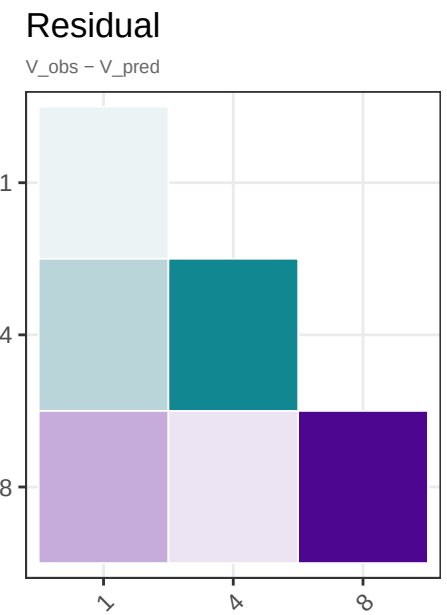

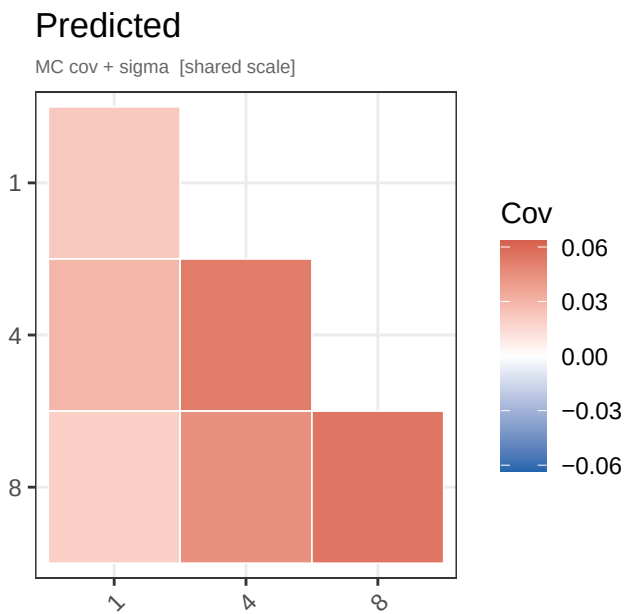

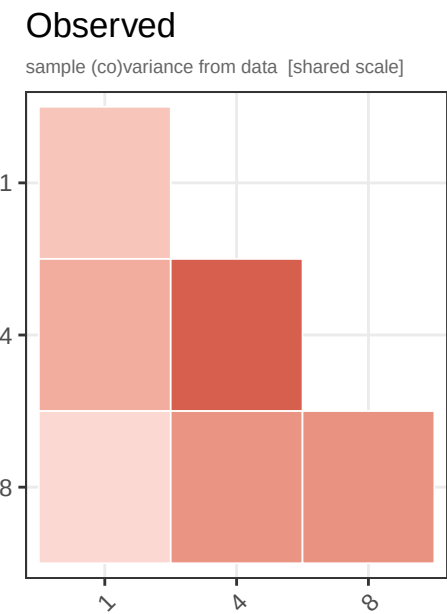

Standardised residual

$z = \text{DeltaCov} / \text{SE}$ | *p<.05 **p<.01 ***p<.001
